

Fascination Culver's Root

Veronicastrum virginicum 'Fascination'

Plant Height: 3 feet

Flower Height: 4 feet

Spread: 3 feet

Spacing: 30 inches

Sunlight: ☉ ●

Hardiness Zone: 3b

Other Names: Culver's Physic

Description:

A very attractive plant as an accent in any garden but more so in butterfly gardens and near watersides, with its whorled leaves and uniquely arranged spikes that resemble a candelabra

Ornamental Features

Fascination Culver's Root features unusual spikes of lilac purple flowers with blue overtones rising above the foliage from mid summer to mid fall. The flowers are excellent for cutting. Its narrow leaves remain dark green in color throughout the season. The fruit is not ornamentally significant.

Landscape Attributes

Fascination Culver's Root is an herbaceous perennial with a rigidly upright and towering form. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Fascination Culver's Root is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Fascination Culver's Root will grow to be about 3 feet tall at maturity extending to 4 feet tall with the flowers, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 30 inches apart. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
